

# Electric Safety Tips

# Have a Safe Summer!

- Be aware of power lines. Always carry ladders and long items horizontally.
- Call a professional to trim trees near power lines.
- Call 811 prior to any digging projects.
- Use only extension cords rated for outdoor use when working outside.
- Make sure your dock area is safe. Ensure that electrical connections are properly installed and maintained.
- Fly kites, drones, and model airplanes safely away from trees and overhead power lines.
- When using large equipment, keep a 10-foot minimum distance around power lines. Use a spotter. Be aware of increased height when loading and transporting tractors on trailer beds.
