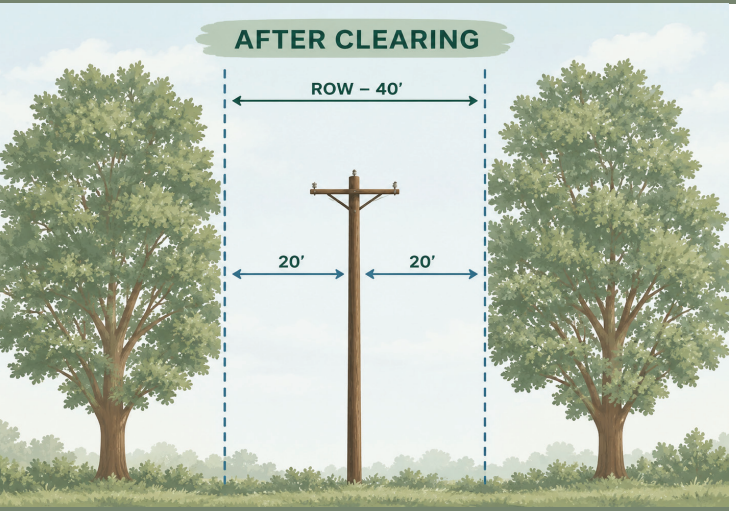
Notice: 2027 Vegetation Management

In the coming months, contractors working for Barron Electric Cooperative will be clearing trees and brush around our power lines. This work helps reduce outages, improve safety and keep your electric service reliable.



Vegetation may be cleared up to 20 feet on each side of the power pole, from the ground upward. Weak, damaged or leaning trees may also be removed if they pose a risk to the power lines.

No overhead power lines on your property?
You can disregard this notice.
Underground lines do not require vegetation clearing.

What You Need to Know

What to Expect
We'll mow, cut and trim trees and brush within the right-of-way—the area around and beneath our power lines. Trained and certified contractors will perform the work, and our crews may also remove trees or branches during routine line patrols.

Please Mark Your Property
Please mark survey pins, property markers, fences or other privately owned items in the work area, so they can be avoided. Barron Electric and its contractors are not responsible for repairs to fences due to age or normal wear.

Trees Near Power Lines
If you have trees growing into or near power lines, please contact us for assistance. Never attempt to trim or remove trees near power lines yourself.

Free Wood Chips
Wood chips may be available after clearing work, and are free while supplies last. To make a request, email operations@barronelectric.com with your name, address and phone number.
